INT-CL (IPC): G06F003/033, G06F003/00

ABSTRACT:

PROBLEM TO BE SOLVED: To provide a personal smart pointer device including a conventional computer mouse provided with additional hardware and software for increasing functionality and a similar pointing device.

SOLUTION: This personal smart pointer device easily connectable to any computer is provided with the hardware and the software facilitating network computerlike application including realization of receipt and storage of information and transfer of information to a slave device such as a PC, a mobile computer, a cellular phone, PDA and another pervasive device. The information to be transferred includes personal preference, properties, and customization of an application/program used on a user's own personal device by the user for facilitating use of an application/program on the slave device. Transmission of the personal preference and customization can be carried out by radio waves.
